

Project Initialization and Planning Phase

Date	2026 july 9
Team ID	
Project Name	OptiCrop – Smart Agricultural Production Optimization System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand the challenges faced by farmers in selecting the most suitable crop for cultivation. The Customer Problem Statement template helps identify the key issues affecting agricultural productivity and supports the development of intelligent, user-centered solutions. A well-defined customer problem statement enables the team to design an AI-powered crop recommendation system that addresses farmers' needs by analyzing soil nutrients and environmental conditions. Throughout the process, the team gains a deeper understanding of farmers' experiences, helping create a reliable, data-driven solution that improves crop selection, enhances agricultural productivity, reduces financial risks, and promotes sustainable farming practices.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer seeking better crop production.	Select the most suitable crop for my farmland.	Soil nutrients and weather conditions vary, making crop selection difficult.	I lack scientific knowledge and reliable data-driven recommendations.	Uncertain about choosing the right crop and worried about financial losses.
